

Job & Internship Matching Platform for Student

A web platform that connects students with the right internships and part-time jobs by matching their skills, preferences, and availability with verified company opportunities.

Problem We Address:

Students often struggle to find internships or part-time jobs that match their skills and academic schedules. Application tracking is unclear, and fake job postings waste time. As a result, students lose valuable opportunities while companies fail to connect with suitable candidates.

What We Are Offering:

Student profiles with skills, resumes, and preferences. Verified job & internship postings by companies. Smart matching of jobs with student skills. Application tracking (Applied, Shortlisted, Interview, Hired). Notifications for new jobs and application updates.

Audience:

Students seeking internships/part-time jobs. Companies/startups hiring young talent. Estimated audience size: 1M+ students in Bangladesh; with 10% penetration, ~100k potential users.

Our Secret Sauce:

Personalized matching of jobs for students. Verified companies only, reducing fake posts. Application tracking system for clarity. All-in-one convenient platform.

Technology Stack:

Frontend: HTML, CSS, JavaScript (optionally React.js). **Backend:** PHP (or Node.js + Express). **Database:** MySQL (no ORM). **Authentication:** PHP sessions / JWT + bcrypt. **Deployment:** Localhost (XAMPP) for development, cPanel/VPS for final hosting.

Task Breakdown (3 Weeks, 3 Members):

Week 1: Database design, authentication (Member 1), UI for login/register (Member 2), DB integration (Member 3). **Week 2:** Job posting & application API (Member 1), Student & Company dashboards (Member 2), Resume upload & API linking (Member 3). **Week 3:** Matching system & notifications (Member 1), Final UI polish (Member 2), Testing, bug fixes, documentation & demo (Member 3).

Deliverables: Working web app, MySQL schema, GitHub source code, documentation, and demo video.
